INTELLIGENT ALL-IN-ONE SOLUTION

for Monitoring^o
Inventory^o
Reporting^o

A central tool for your needs

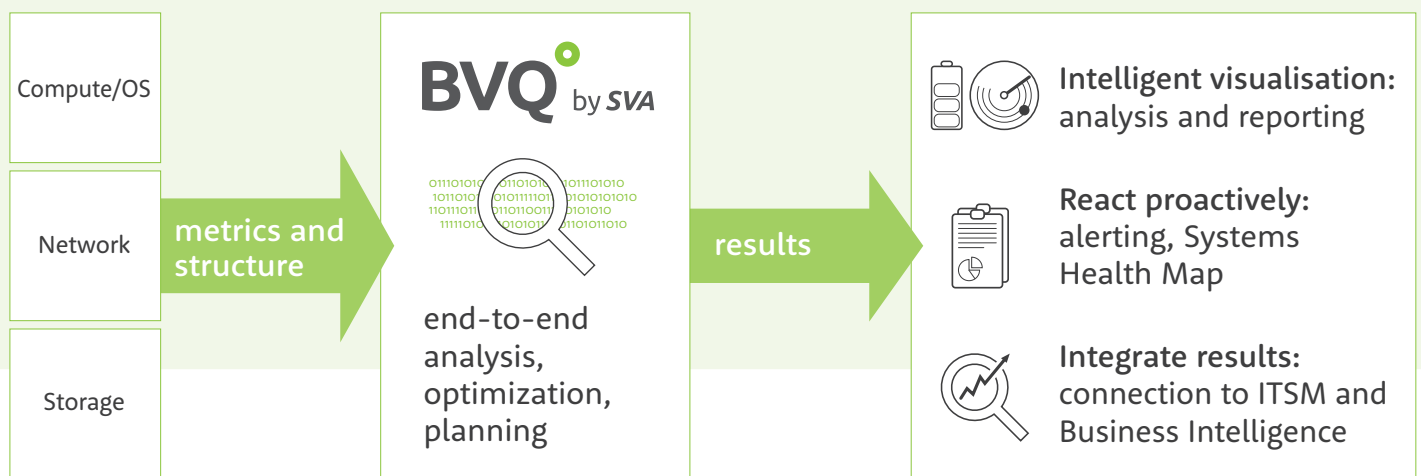

Your IT infrastructure is required to do more and more. The demands are speed, high availability and, of course, efficiency, combined with simple management. There are several tools for this purpose, but the SVA solution BVQ° stands out in many ways:

- > **Gain control:** BVQ° takes charge over the inventory, monitoring, analysis and reporting of your entire IT infrastructure.
- > **Increase planning security:** BVQ° provides deep insights into your IT infrastructure and reveals dependencies of system components as well as end-to-end performance.
- > **Automate processes:** BVQ° can be easily integrated into your familiar ITSM systems. System status updates are automatic with BVQ°.
- > **For all environment sizes:** BVQ°'s cost-effective licensing makes it affordable for any environment size. BVQ° supports a variety of platforms and fits well with your IT infrastructure.

Automate IT Monitoring with BVQ°

BVQ° serves as the control center, the cockpit for your IT systems. It visualizes your infrastructure in a clear and logical end-to-end view, making it easier to connect your IT infrastructure to ITSM, reporting and BI solutions due to its central position. This allows you to continuously benefit from a comprehensive and clear overview of complex technical details. BVQ° automatically alerts you to any irregularities before problems occur. Integrated ticketing systems facilitate workflows, ensuring that processes seamlessly align with each other.

All-in-one solution for your IT

BVQ° Dashboarding & Reporting

... for a comprehensive overview

Predefined dashboards and reports display all important data of your infrastructure, such as capacity utilization, system status or performance. The dashboards and reports can be customized or expanded and the display is intuitive and interactive via web browser or as PDF export.

BVQ° Health Check and Alerting

... for automatic monitoring and rapid response

Provides an at-a-glance status of all systems and reveals optimization opportunities, operational risks, bottlenecks, thresholds and violations of best practices. A steadily growing number of predefined checks ensure the stability of your operation and promote high efficiency. Of course, these checks can also be individually tailored or custom check templates can be created.

BVQ° Analysis

... for deeper insights into relationships

Our high-performance software platform provides in-depth predefined pattern analyses and practical examples, making it quick to identify most root causes. It also provides answers to complex questions about detailed load profiles and dependencies between components within the interconnected infrastructure.

BVQ° Connect

... for integration with ITSM and Business Intelligence

BVQ° Connect seamlessly integrates all BVQ° information into your ITSM or BI systems through a modern REST interface. For example, the health status, infrastructure configuration and key performance indicators analyzed in BVQ° become visible directly in your ITSM system. BVQ° Connect eliminates the need for labor-intensive pre-analysis, correlation, reduction and generalization of information for ITSM/BI systems, making it easier and faster to adapt these systems.

BVQ° Platforms

... for a seamless representation of all system areas

You can also use BVQ° for individual systems. Its true strength becomes apparent when it brings together all levels of your IT infrastructure, including compute, network and storage, into a connected end-to-end mapping.

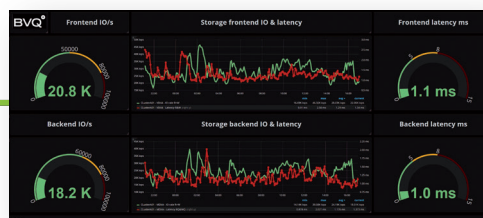

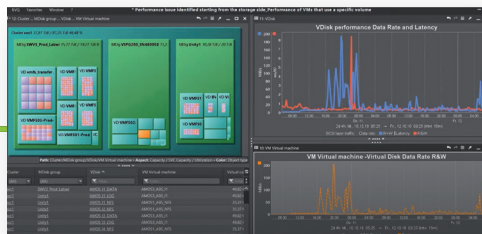

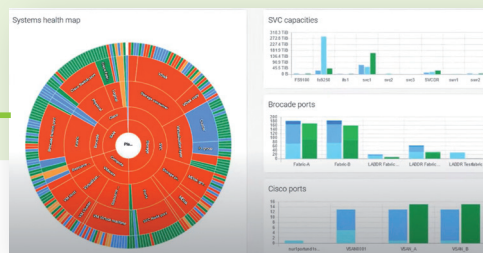

BVQ° Services

... for peace of mind

You can operate BVQ° as an on-premises solution yourself or use it as a service. Our experienced SVA experts assist you in integrating BVQ° into your company, ensuring smooth operation and providing quick support for all inquiries.

BVQ° Value Proposition Summary:

- > simple and easily understandable monitoring, analysis and reporting with a genuine end-to-end perspective
- > broad platform support across all levels of the infrastructure: compute, networking, storage and hyperconverged
- > automatic health checks: highly adaptable monitoring of thresholds, best practice rules, risk indicators and optimization opportunities
- > in-depth analysis capabilities
- > powerful Connect Interface as the central connection point for integrating IT infrastructure with ITSM, reporting and business intelligence systems via REST API
- > SVA services support customization, operation and specialized issue resolution

We look forward
to hearing from you.

SVA is one of the leading IT service providers in Germany and employs more than 2700 employees at 27 locations. The corporate objective of SVA is the combination of high quality IT products of different vendors with the project know-how and flexibility of SVA to achieve optimum solutions for customers.

The professional focus areas of SVA are:

- > Agile IT & Software Development
- > Big Data Analytics & IoT
- > Business Continuity
- > Cyber Security
- > Datacenter Infrastructure
- > Digital Process Solutions
- > End-User Computing
- > Mainframe
- > SAP

Platforms supported by BVQ°:

- > AIX
- > Linux
- > Kubernetes
- > VMware vSphere and vSAN
- > IBM PowerVM
- > Brocade & Cisco SAN
- > IBM Spectrum Virtualize, Storwize & Flash
- > Dell EMC Unity
- > NetApp ONTAP
- > ITSM & BI Connector
